

Step 1
Switch to your Skies folder by pressing the "+" button.

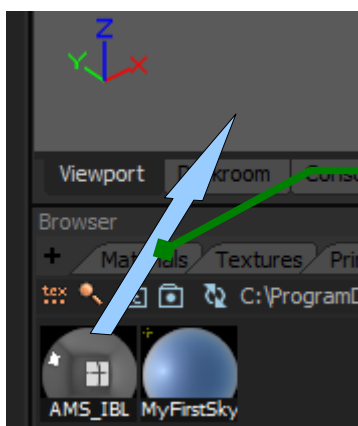

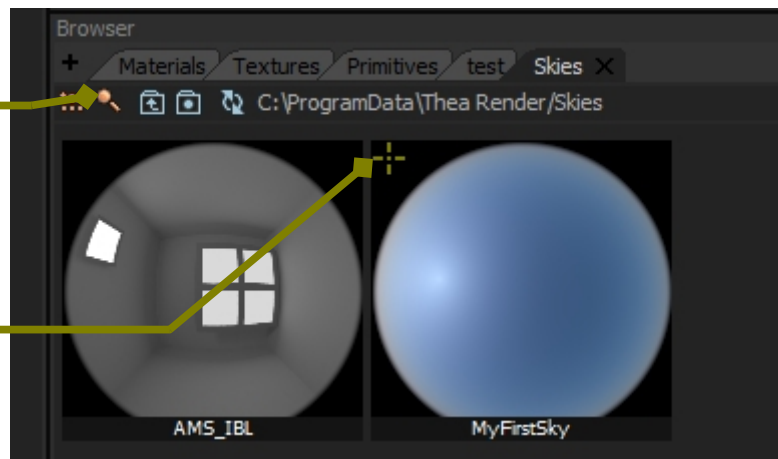

Step 2
Right click and Save Sky.
You will be asked to give a name.

Notice that the sky is saved in the browser with a top view of the sky/ibl.

You can also click (twice) on the magnifier icon to show the thumbnails at their highest supported resolution (150x150).

Notice the cross icon that can be seen on the sky/ibl thumbnail. It shows that the sky contains an active sun light!

Step 3
Drag and drop your saved sky into the Viewport. Your Scene Sky/IBL and Sun settings will be updated accordingly.
